Git · Docker · Vite · GA4 · GTM · SSG/ISR · CI/CD · Agile

EDUCATION

BSc (Hons) Information Technology
Computer Networking & Security
Sunway University, Selangor
2018 – 2021

PROFILE

Frontend developer with 5+ years building responsive, accessible web applications across automotive, banking, consulting, and digital entertainment. Currently at Pixent owning frontend delivery for a customer-facing consumer platform, with a track record shipping enterprise products at Deloitte for Maybank. Comfortable owning the full frontend lifecycle from POC to production — and the workflow around it: analytics, performance, and CI.

EXPERIENCE

Frontend Developer
Dec 2025 – Present
Pixent Technologies · Kuala Lumpur

- Own frontend delivery across 4 applications — 2 consumer platforms, a partner portal, and a CMS — as 1 of 5 developers under a team lead.
- Built the KYC verification module end to end as a resumable 8-screen flow: profile-level status checks, conditional mobile registration with OTP, bank-detail submission, admin review, and a final amount challenge.
- Building mini-player and picture-in-picture playback for a new release, keeping sessions alive while users browse the catalogue.
- Partnered with the product designer on a shared design system and enforced it in code as a single token set for colour, buttons, and alerts.
- Introduced the platform's first analytics coverage (GA4 via GTM) at the CTO's request, plus a pre-push lint hook; delivered the partner dashboard for referral tracking and performance reporting.

Senior Technology Analyst
Apr 2024 – Nov 2025
Deloitte Consulting SEA · Maybank M2E

- Developed a secure enterprise banking web app (React, Tailwind, Zustand) for products such as Deposits and Loans.
- Integrated RESTful APIs for real-time banking data and built multi-step terms-and-conditions flows.
- Created reusable components, ensured cross-browser compatibility, and partnered with QA to resolve issues.
- Fixed 7 tickets in 2 days on an unfamiliar codebase without prior context.

Frontend Developer
Nov 2022 – Mar 2024
Edag Holding · Shah Alam

- Conceptualised and initiated a resource-planning app for project managers; built a POC to validate feasibility and functionality.
- Resolved 82 merge conflicts across 7 branches and wrote Jest unit tests with 80% coverage.
- Shared frontend and code-quality practices across Malaysia and Germany teams.

Frontend Developer
Sep 2021 – Oct 2022
OmniGeo Solutions · Kepong

Developed an admin system with Next.js and Bootstrap · built custom CSV upload, processing, and error handling · implemented OAuth via NextAuth.
